To,

Manoj Shrestha

Academic Strategic Head

Softwarica College of IT & E-commerce

Gyaneshwor Marg, Kathmandu 44600

Nepal.

Dear Mr. Shrestha,

It is with much interest and excitement that I apply for the position of Ai and Robotics intern in the IOT department at Softwarica College of IT & E-commerce. I am a 4th semester student of this college pursuing my degree on BSC Hons computing. As I have done projects on food delivery robot, Image Processing and Lego puppy with assistance from IOT department, I would like to know more about robotics and AI and work on IOT Department to gain more knowledge as an intern and pursue more knowledge on it.

Robotics and Ai has been always on the top of my list. The opportunities created by your department for students to learn and get experience as real projects has encouraged us to explore new territories without boundaries. What drew me towards the IOT department is the mass knowledge community with friendly and cooperative environment and creativeness. Everyone is helping and welcoming for all backgrounds of students.

If I were to be selected as an Intern I will be more than happy to share my knowledge with the new students and gain knowledge with our seniors and improve my skills so that I won't be any hindrance to the department. I have worked before as a subsidy manger for 2 years and carried out the task of management of staffs, work division, project plans and client handling of my company. My chief has never been unsatisfied with my work.

I hope you find my educational background, previous work experience and skills meet your requirement for this position. If successful, it would be golden opportunity for me to develop my skills.

I hope to hear from you soon.

Yours sincerely,

Bipash Chhantyal
