Charkhal Rd, Kathmandu 44605, Nepal

Dear sir,
I am interested in applying this application for the power platform internship job that was posted on your official website. Recently, I completed my 2nd year of BSc (Hons) computing at Softwarica College and also gained lots of experience and knowledge that matches the job requirements.

I am very good with python, java, and javascript programming language, web development, SQL, and NoSQL databases. I have designed a library management system using SQL database, also worked in front-end web development for the Uplift company, and recently, worked on a group project "GharDailo Website". These all give me experience working on a team, good problem-solving, conflict resolution, and communication skills, willingness to improve myself and learn more, flexibility, and speed to be suited to the changing requirements.

I am very enthusiastic about technology since my childhood and always dream of becoming a great programmer and successful businessman. Working in a company that has great values like yours always have been a part of my dream because it will increase my knowledge and skills, give me more encouragement and prestige.

As every single requirement matches my knowledge, skills, and with some extra bit of knowledge, skills besides the requirements, I am perfectly eligible for the job. If I got a chance to work on your organization, I will not disappoint you and leave no stone unturned for the sake of your organization. You can contact me at any time either by phone or by email address. I am looking for your positive response and hoped to be contacted very soon.

Yours Sincerely,
Gauri Shankar Sharma
